Why 9 out of 10 F&B businesses agree...

Restaurants have been heavily hit with many concerns, from rising cost in rental, to hiring & maintaining staffs. Running an operation like how it used to be is a thing of the past, and embracing technology to create new revenue channels, improve productivity and lowering cost is the new game.

We believe in empowering restaurants with amazing tools to improve their brand, ordering experience and increase repeat sales.

Every business needs a strong foundation...

Whether small, medium or large sized restaurant, NinjaOS serves as a bridge to connect the dots between the retail & online ordering experience and provide key information about the business so restaurants can be more efficient and profitable.

Cost effective, reliable and robust to make operations simpler, customer service & ordering experience better, reporting and business insights available for restaurants small to large.

Clients who love what we do
